Blue Rover Web Application for the Restaurant Group 2015

Challenge:

Create a platform agnostic (non-native) web mobile application that will track temperature sensor data, and provide it in an engaging, useful and intuitive interface. The data needs to be presented in an efficient and effective way.

Objective:

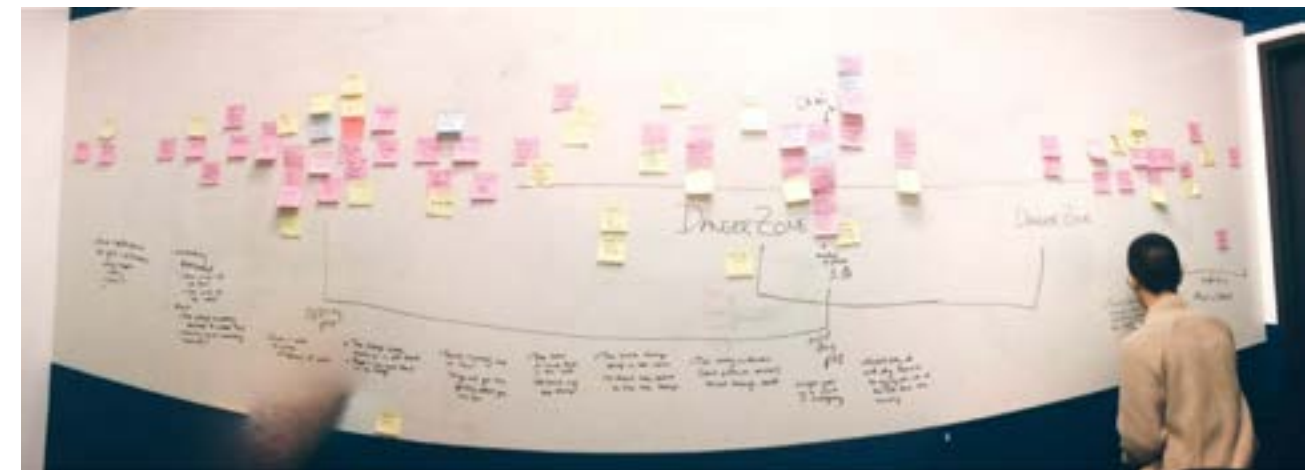

The Restaurant Group is a franchise restaurant chain that wants to use blueRover's various sensors to monitor and alert their staff of food storage issues in their beer fridges, walk-in coolers and freezers, deep fryers, and ovens. In tracking this temperature information in real time, the company hopes to a) comply with health and safety standards, b) prevent food from going bad due to not monitoring and addressing fluctuating temperatures in storage containers, and c) to use this information to inform their purchasing decisions to help them save money.

Interviewing Stackholders

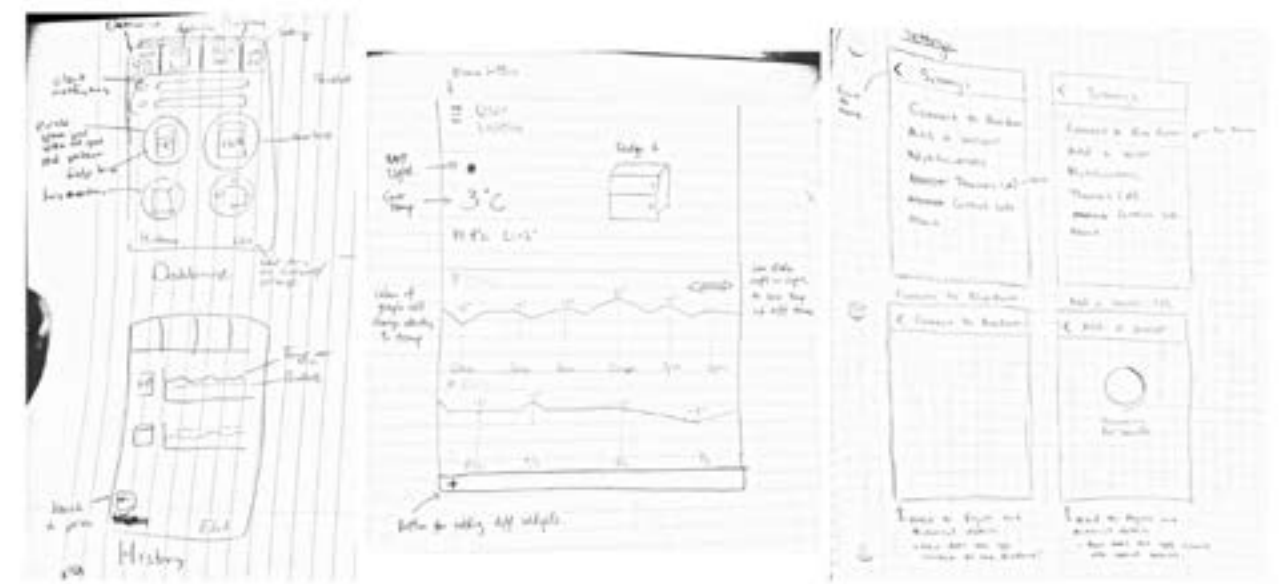

Findings:

- Things done manually
- Limited use of technology
- Simplicity is key
- App intriguing but unnecessary

DBRS iPad App 2014

Time taken to finish the design: around 2 weeks, 4 hours a day, 5 days a week

Designers involved: 1

Engineers involved: 1

Platform: iOS

What tools did I use throughout the product cycle?

PhotoShop and Illustrator are my main tools.

What does the company do?

They rate debentures and bonds and they sell the reports to investors.

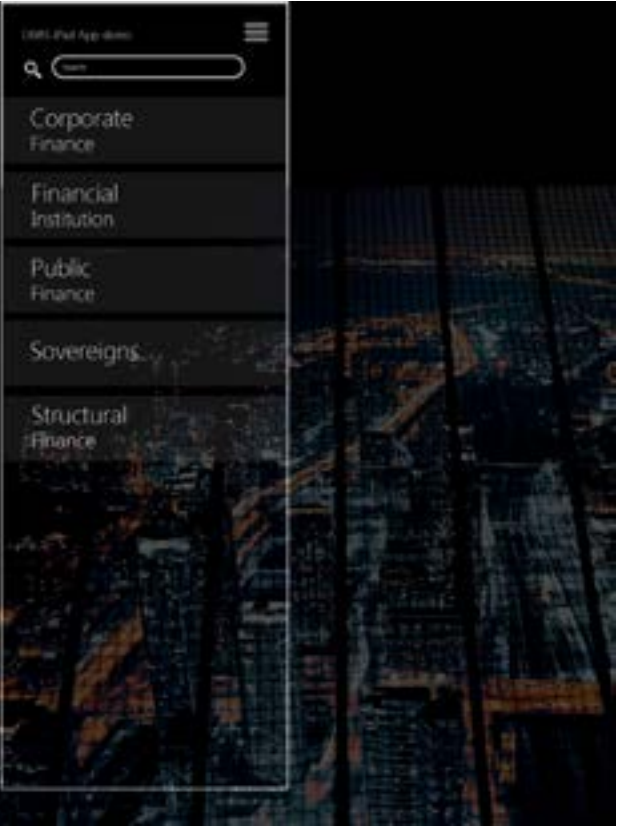

This is my first formal app design.
